THE VESSEL

A *high-speed aluminum research platform* — jet driven, survey equipped, shallow-water capable.

R/V Poulsbo is a custom 38-foot welded-aluminum patrol and research vessel engineered for sampling, survey, and support work across Puget Sound. Her hull and propulsion package pair offshore strength with the shallow-water access demanded by nearshore field operations.

Twin 550-horsepower gasoline engines drive waterjets for 1,100 total horsepower, a 40-knot cruise, and close-quarters control without exposed propellers. Five hundred gallons of fuel support an estimated 500-mile range, giving crews the speed and endurance to move between distant work sites in a single operating window.

The stern working deck centers on a hydraulic A-frame and custom research winch rated for equipment deployments up to 2,000 pounds. The arrangement supports towed video and side-scan sonar, while dedicated bow and stern pole mounts are configured for multibeam and sub-bottom survey equipment. Three-phase power is available for vibracoring and ROV operations.

Inside, a full cabin provides protected work space, a dinette, crew berths, an enclosed head, and a survey-ready main helm. Radar, VHF, chartplotter, survey sonar, and a Trimble 461 RTK GPS system are joined by inverter and solar systems that provide clean power for sensitive electronics. Offered at $249,000 and available for inspection by appointment.

VESSEL HIGHLIGHTS

— Custom welded-aluminum patrol / research vessel	— Twin 550hp gasoline engines — 1,100hp total
— Waterjet propulsion — offshore & shallow-water capable	— 40-knot cruise · estimated 500-mile range
— 500-gallon gasoline capacity	— Hydraulic stern A-frame — 2,000 lb capacity
— Custom research winch	— Towed video & side-scan sonar deployment setup
— Bow & stern sonar pole mounts	— Multibeam & sub-bottom survey configured
— Three-phase power for vibracoring and ROVs	— Radar, VHF, chartplotter & Trimble 461 RTK GPS
— Inverter and solar clean-power system	— Crew berths, work space, heater & enclosed head
